Welcome to our world of packaging solutions

Whether for cosmetics, cleaning agents, food, beverages or technical products, we offer the right packaging for every product and industry. With our extensive range of bottles, jars and closures, we help you present your product in the best possible way.

A family business with more than 50 years of experience
As a family-owned company, we have been shaping the packaging industry for over half a century. Personal service, long-term relationships and quality are at the heart of everything we do.

Together with our sister company hd packaging, we combine technical expertise and creativity to deliver packaging solutions that perfectly match your brand and product. With our own mould production, we can create custom designs and also offer a wide standard range.

Two platforms with one shared goal
Through our two platforms, we meet a wide range of needs. At plasticbottles.eu, we focus on custom solutions and bulk orders. This is where individual design, expert advice and bespoke production come together.
At plasticbottleshop.eu, flexibility takes centre stage. With no minimum order quantity and fast delivery from stock, this platform is ideal for small businesses, start-ups and anyone who values convenience.

Committed to people and the environment
For us, packaging is not only about functionality, but also about responsibility.

We cooperate with long-standing European partners, use recycled PET and HDPE and optimise our transport and logistics. Our bottles are designed to minimise material use while maintaining quality.

Social responsibility is equally important to us. At our warehouse in Groningen, we support people with limited access to the labour market by providing opportunities to gain work experience and find their place in professional life.

Smart, reliable and sustainable packaging solutions
Whether you are looking for tailor-made concepts or ready-to-ship products, we make packaging simple, dependable and future-proof. Discover how we can help you create packaging that combines functionality, strong design and sustainable thinking.

Partner with us to unbottle the potential of your product!

The power of plastic...

Plastic may not seem special, but it is one of the strongest and lightest materials available. It protects valuable products while being transparent and is incredibly durable. As a producer of products, plastic offers numerous advantages compared to other packaging materials.

Strong and light

Plastic is ideal for production and transport. It requires less material to protect products, making it efficient and cost-effective

Perfect protection

Plastic safeguards against external factors like oxygen, CO2, and other airborne agents, preserving product integrity.

Durable and recyclable

Plastic lasts long and can be reused repeatedly if we recognize its value as a resource, thus reducing waste.

Versatile and attractive

There are many types of plastic packaging that can protect a wide range of products while looking appealing and innovative.

Moreover, plastic is integrated into our daily lives. It is everywhere, even though we may not realize it every day. It is in the casing of your laptop, the interior components of your car, and kitchen appliances. Furthermore, it protects your food and beverages, keeping them safe and fresh.

"It's time that we start looking at plastic as a valuable material instead of as something without value. Then, plastic waste would be used again as a resource for new products."

...with respect for the world!

A world where we benefit from the advantages of plastic without wasting it. Because it is true: plastic waste remains over 500 years in nature. But what about glass jars and bottles, which can remain for 1 to 2 million years. Or soda cans of aluminium, which remain 200 years in nature? Cardboard drink or milk cartons only stay 2 to 3 months in nature, but don't offer moisture protection, a barrier against co2, oxygen, odours or a transparent look.

Responsible use of plastic

Did you know that using plastic is not as bad for the environment as you might think? First, plastic can also be made of raw materials such as corn, instead of petroleum. Second, plastic packaging has a relatively small carbon footprint because it is light and thin-walled. You only need a small amount per product. The energy used for production and transportation is limited. So why do we throw away such a valuable material that can be reused for multiple purposes?

It would be great if more companies and consumers chose recycled plastic instead of non-recycled plastic. That way, plastic waste becomes valuable again, and plastic becomes the more sustainable choice. Therefore, we invite you to choose recycled plastic packages.

A quick guide to bottle shapes

Choosing the right bottle shape is essential for both functionality and brand identity. This quick guide will help you understand the various shapes available and how each can best serve your product's needs. All of these shapes are available in PET, HDPE, and their recycled equivalents, with matching closures.

Round Bottles
Round bottles are the most common and versatile shape in the packaging industry. Their cylindrical design makes them easy to handle and label, and they are widely used in cosmetics, beverages, and cleaning products. Their classic shape is both timeless and functional.

Oval Bottles
Oval bottles offer a unique blend of style and practicality. With their smooth, elongated shape, they provide a comfortable grip and a sleek profile. This shape is often selected for personal care products, like lotions and shampoos, where an ergonomic design is desired.

Rectangular Bottles
Rectangular bottles are known for their space-saving design. Their flat sides make them easy to stack and store, maximizing storage efficiency. This shape is popular in the food and beverage industry, particularly for sauces, juices, and condiments, where efficient packaging is key.

Square Bottles
Square bottles stand out for their modern, edgy look. Their uniform shape allows for tight packing on pallets, reducing wasted space during shipping. They are typically used for premium products like speciality beverages and luxury cosmetics, where both style and practicality are important.

Diverse and Custom Bottles
This is a wide range of unique and specialised shapes that don't fit into the standard categories. These can include custom designs tailored for specific products, offering distinct branding opportunities. Diverse shapes are often used in niche markets, where a unique bottle can make a product stand out on the shelf.

Whether you prioritize efficiency, aesthetics, or a unique brand statement: we always have a bottle shape to match your goals. Explore these options to find the perfect fit for your product and market. We're happy to help you choose the right option for your product line.

The top 5 series in the industry

Packaging is everywhere, and some bottles have truly earned their place as industry favourites. Whether it's through smart design, practical use or simply by becoming the standard, these five bottles lead the way.

1. Basic Round Series (HDPE)
The essential all-rounder. From cosmetics to cleaning products, the Basic Round HDPE bottle is a trusted choice across industries. Its friendly, cylindrical design makes it easy to fill, label and use, while its sturdy shape ensures it always stands strong.

2. Basic Sharp Series (PET)
A touch more refined. The Basic Sharp PET bottle offers a sleeker profile with its sharp shoulders and clear, glossy finish. Often used for premium cosmetics and personal care, this bottle combines modern looks with everyday practicality.

3. Multi Series (R-HDPE)
The multifunctional hero. The Multi Series includes everything from standard bottles to trigger sprays and toilet cleaner designs. Available in various sizes and closures, this family is designed to meet the demands of professional environments, from cleaning to automotive.

4. Juice Square series (PET)
Smart, space-saving design. The Juice Square PET bottle breaks away from round shapes with its compact square design, perfect for juices and smoothies. Easy to stack, easy to label, and fitted with a tamper-evident cap for extra security.

5. Sauce Cylinder Series (HDPE)
Simple, squeezable and reliable. The Sauce Cylinder HDPE bottle, often found in kitchens and food service, combines soft, flexible material with precise dispensing. Ideal for sauces, dressings, and condiments that need to be served with care.

What's right for your product?
Each of these bottles excels in its niche. Whether you need safety caps, pumps or closures, they can be adapted to suit your product. Curious which option works best for you? Our team is happy to advise and help you make the right choice

PET & R-PET

Sustainable, recyclable, durable and cost-efficient

Polyethylene terephthalate (PET) is a widely used plastic material known for its durability, lightweight nature, and recyclability. It is ideal for making bottles and packaging due to its clarity and strength. Recycled PET (rPET) is PET that has been reprocessed after use, contributing to sustainability by reducing waste and consuming less energy than newly produced PET. rPET retains most properties of new PET, such as strength and clarity, although it can often be slightly discoloured. By choosing rPET bottles, you support a circular economy and reduce the ecological footprint of your products. Let's highlight the differences and introduce available shapes, series, and closures.

PET

Polyethylene terephthalate (PET) offers excellent durability and impact resistance, making it an ideal choice for packaging solutions. Its lightweight nature helps reduce transportation expenses, and its clarity enhances product visibility. Additionally, PET is highly recyclable, contributing to environmental sustainability by reducing waste and conserving natural resources. This material is also safe for food and beverage storage, ensuring that it does not react with the contents. PET's versatility extends beyond packaging, finding applications in textiles and automotive parts. By selecting PET bottles, you benefit from a reliable, sustainable, and versatile material suitable for a wide range of uses.

Recycled PET

Recycled PET (rPET) is an eco-friendly alternative to virgin PET, produced through reprocessing used PET bottles and containers. This process significantly reduces waste and energy consumption, supporting a more sustainable environment. rPET maintains similar properties to new PET, including strength and clarity, though it may exhibit slight colour variations. Advancements in recycling technology have improved the quality of rPET, making it a viable option for various packaging needs. By opting for rPET bottles, you help promote a circular economy and minimise the ecological impact of your products. rPET is an excellent choice for those committed to sustainability without compromising on quality.

Matching fitting closure

Dreaming of a spice package that fits in every kitchen drawer? The Spice Square PET jar takes up little space thanks to its square design and offers a clean, distinctive look. Available in multiple sizes to create a complete and uniform product line.

The perfect bottle for every product.

Guaranteed quality
We guarantee high-quality bottles at a great price.

Broad range
From round to square, and from cosmetics to food: we have the right bottle for every category.

Orders from 1 up to 10,000
All of our bottles can be ordered from as little as 1 item, up to 10,000, and are delivered within a few working days!

All-in-one service: including labelling or printing
Do you need a label or printing? We offer labelling and direct printing services, everything taken care of in one go.

Opportunities for others
People who are dis-advantaged in terms of employment are given an opportunity to work with us.

Sustainability
We provide all the information you need about recycled plastic, and ensure recycled bottles are available to everyone.

The perfect combination can be found for your brand and product. Visit our showroom in Germany or the Netherlands to see what we can do.

r-HDPE

2 HDPE

HDPE & R-HDPE

Robust, durable, versatile and moist-resistant

High-density polyethylene (HDPE) is a widely used plastic known for its robustness and versatility. It is an essential material in various industries, particularly for packaging and construction, due to its durability and resistance to moisture and chemicals. Recycled HDPE (rHDPE) takes the benefits of HDPE a step further by reprocessing used HDPE, thereby promoting sustainability. Utilizing rHDPE helps reduce environmental impact, conserve resources, and lower production costs. Both HDPE and rHDPE play crucial roles in modern manufacturing, offering solutions that balance performance with environmental responsibility. Understanding their unique benefits can guide better choices in material selection for various applications.

HDPE
HDPE is a strong, durable plastic renowned for its impact resistance and low moisture absorption. These properties make it ideal for a wide range of applications, from piping systems to packaging. HDPE is particularly valued in industries requiring robust containers and protective elements due to its high tensile strength and resistance to chemicals. Its lightweight nature also contributes to its popularity, reducing transportation expenses while maintaining product integrity. Additionally, HDPE's recyclability supports environmental sustainability, making it a favoured choice for eco-conscious manufacturers seeking reliable and versatile material solutions

Recycled HDPE
Recycled HDPE (rHDPE) is HDPE that has been reprocessed after its initial use, contributing significantly to environmental sustainability. The recycling process involves collecting, sorting, cleaning, and re-melting HDPE waste to form new products. rHDPE retains many properties of virgin HDPE, such as strength and durability, though it may exhibit slight colour variations. Using rHDPE reduces plastic waste in landfills, conserves natural resources, and requires less energy than producing new HDPE. This makes rHDPE a cost-effective and eco-friendly alternative, supporting a circular economy and reducing the overall ecological footprint of plastic products.

Examples of fitting closures

The go-to bottle for sauces and dressings. Available in natural and white HDPE. This flexible design makes precise dosing easy, while the clean look suits both professional kitchens and food production environments.

From waste to resource

Quick guide on how to (re)use plastic properly

Plastic is a fantastic product if we use it right. As a producer and distributor of plastic bottles, we know how to do this. Using plastic responsibly requires cooperation with our supply chain partners. In this overview, we share 7 tips on how to do so.

Choose the right kind of plastic
Selecting the appropriate type of plastic for your products is crucial. Opt for plastics that are easier to recycle and have a lower environmental impact. For instance, PET and HDPE are widely recycled and have established recycling streams.

Inform customers about recycling
Educating customers on how to recycle plastic bottles properly can significantly boost recycling rates. Clear labelling and instructions on the packaging can guide consumers to dispose of their plastic responsibly, reducing contamination in recycling bins.

Buy from a sustainable company
Sourcing plastic from companies that prioritize sustainability helps ensure that the entire supply chain is environmentally friendly. As a supplier, we aim to be eco-friendly, by using renewable energy and minimizing waste in our production processes.

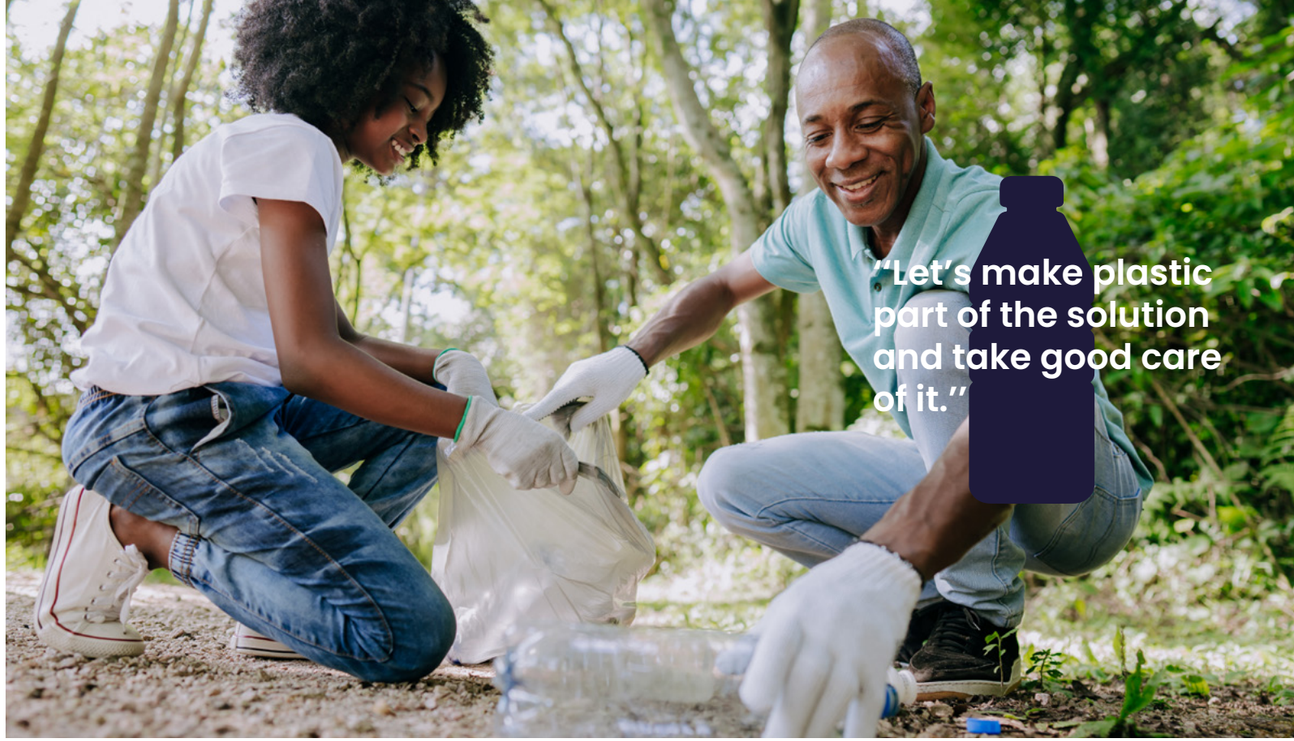

Choose natural colours
Using natural or clear colours in plastic products can enhance their recyclability. Dark and brightly coloured plastics are harder to recycle and often end up in landfills. By sticking to natural colours, we can improve the quality of recycled plastics.

Produce and sell in Europe
Manufacturing and distributing products within Europe can reduce the carbon footprint associated with transportation. Shorter supply chains mean lower emissions and a smaller environmental impact, making the process more sustainable.

Improve packaging designs
Innovative packaging designs that use less plastic without compromising quality can greatly reduce environmental impact. Light weighting and redesigning products to use minimal material help conserve resources and decrease waste.

Use recycled plastic
Incorporating recycled plastic into new products closes the loop and reduces the demand for virgin plastic. This practice supports the recycling industry and decreases the overall environmental footprint of plastic production.

Our vision is to keep using plastic while caring for the world around us. With the right strategies and partners, you can do both. Do you want to work together on sustainable packaging with the use of recycled plastic? Or do you want to receive personalized tips for reducing your plastic footprint? Please get in touch with us.

Polypropylene(PP)

Strong, heat-resistant, and chemically robust

Polypropylene (PP) is a versatile plastic with high strength, a glossy surface and excellent resistance to chemicals. It performs well at high temperatures, up to approximately 90°C, but is less impact resistant at lower temperatures.PP is widely used for jars, closures and packaging that require heat stability and chemical durability. It resists acids, bases, alcohols and essential oils, and is also food-safe and recyclable.

Key features

- Food-safe and recyclable
- Heat resistant up to approx. 90°C
- Density: 0.91 g/cm³
- Excellent chemical resistance
- Ideal for jars, closures and heat-exposed packaging
- Limited impact resistance at low temperatures

PP is a reliable choice for packaging that needs to withstand heat and chemical exposure.
